

### Assignment #6 - P H Implementation Guides

We have this data map prepared by eicr.aimsplatform available:

<https://tinyurl.com/eicrdata>

You need to find out which data items you will extract from each EICR report to answer these three questions about a given set of cases:

- 1- Is there a link between gestational age, travel history and pregnancy outcome for patients affected by Zika
- 2- Is there a link between current occupation and WBC count for the reportable cases of Ehrlichiosis?
- 3- How many cases of mpox were reported from Hospital Lake Charles, more than 24 hrs. since detected?
- 5- How many patients diagnosed with tetanus were immunized at reporting time?

Please identify the data items in the map, and also extract the corresponding data from our FHIR example:
